

Dear GEAA members and friends,

Today the [Planning Commission of the City of San Antonio](#) is considering approval for another development on the Edwards Aquifer Recharge Zone with known habitat of endangered karst invertebrates and golden cheeked warblers. For years the City has approved too many developments that flagrantly violate the Endangered Species Act, causing trouble for those landowners, like [Camp Bullis](#), who actually do comply with the law.

GEAA calls upon the City of San Antonio to require compliance with the Endangered Species Act. [Click here to read comments](#)

GEAA also calls upon the Bexar County Commissioners to approve a [Habitat Conservation Plan](#) for endangered karst invertebrates that is adequate to preserving these unique species, and the Edwards Aquifer recharge caves where they reside.

If you would like to help with GEAA's efforts to preserve the Edwards Aquifer Recharge Zone and its unique indigenous species, [click here](#).
