Dear teachers,

This is a bit last minute, but I wanted to let you know about an upcoming in-service that GEAA is hosting, entitled "Human Impact on the Edwards Aquifer." **It's next Thursday, September 24th, from 8:30 - 4:00 at Region 20.**

We have offered this workshop to teachers in the past, but we've changed the format a bit this time. This in-service will be led entirely by Joann DeLuna, a well-seasoned teacher who now serves as Secondary Science Facilitator for South San Antonio ISD. The day will include a classroom [demo](#), [make & take](#) watershed model, a hands-on [lab activity](#), a synopsis of the Edwards Aquifer tailored to the new [TEKS](#) (7.8C especially), and a chance to photograph [recharge features](#).

We are partnering with Region 20 to host this event, so you can sign up for it via iLearning at www.esc20.net.

If you know of any middle school teachers who might be interested in attending this workshop, please pass this email along! I'd appreciate your help in spreading the word...

Hope to see you next week!
