

Dear GEAA members and friends,

This week we got a packet of letters in the mail from Zamora Middle School students thanking GEAA and [Rackspace](#) for teaching them about the Edwards Aquifer.

Reading these letters made me extremely grateful for GEAA's partnership with [Rackspace](#) and Communities in Schools of San Antonio to present [in-classroom labs and lectures](#) and trips to [Government Canyon State Natural Area](#) to hundreds of students each year.

Dear Rackspace and GEAA

Thank you for taking your time to educate us about the Aquifer. I liked how it took a long time ~~made~~ for the aquifer to form. I want to make a difference and help out with the aquifer. Thanks to you
Mrs. Deluna

Thank you,

Yasmin

Tomatos
are
life!!

They also made me laugh. I'm pretty sure Mrs. De Luna ([Joann De Luna, GEAA Education Director](#)) didn't say anything about tomatoes in her presentation. But, it was pretty clear from the letters that she did a great job of sparking the students curiosity about the aquifer and its caves and critters - as well as teaching them what they must do to protect our water resources.

So, I wanted to share these [heartwarming letters](#) with all of you and thank you, Rackspace, and the Texas Department of Parks and Wildlife for making these programs possible. And, to let you know how proud I am to be working with incredibly qualified folks like Mrs. De Luna as part of our GEAA staff.

Have a great weekend!

Annalisa Peace
